PHENOMENON: PERFORMANCE DROPS IN VIRTUAL WORLDS

Source: <http://bit.ly/EveOnline21Crash>

NEWS

Players in Eve Online broke a world record — and then the game itself

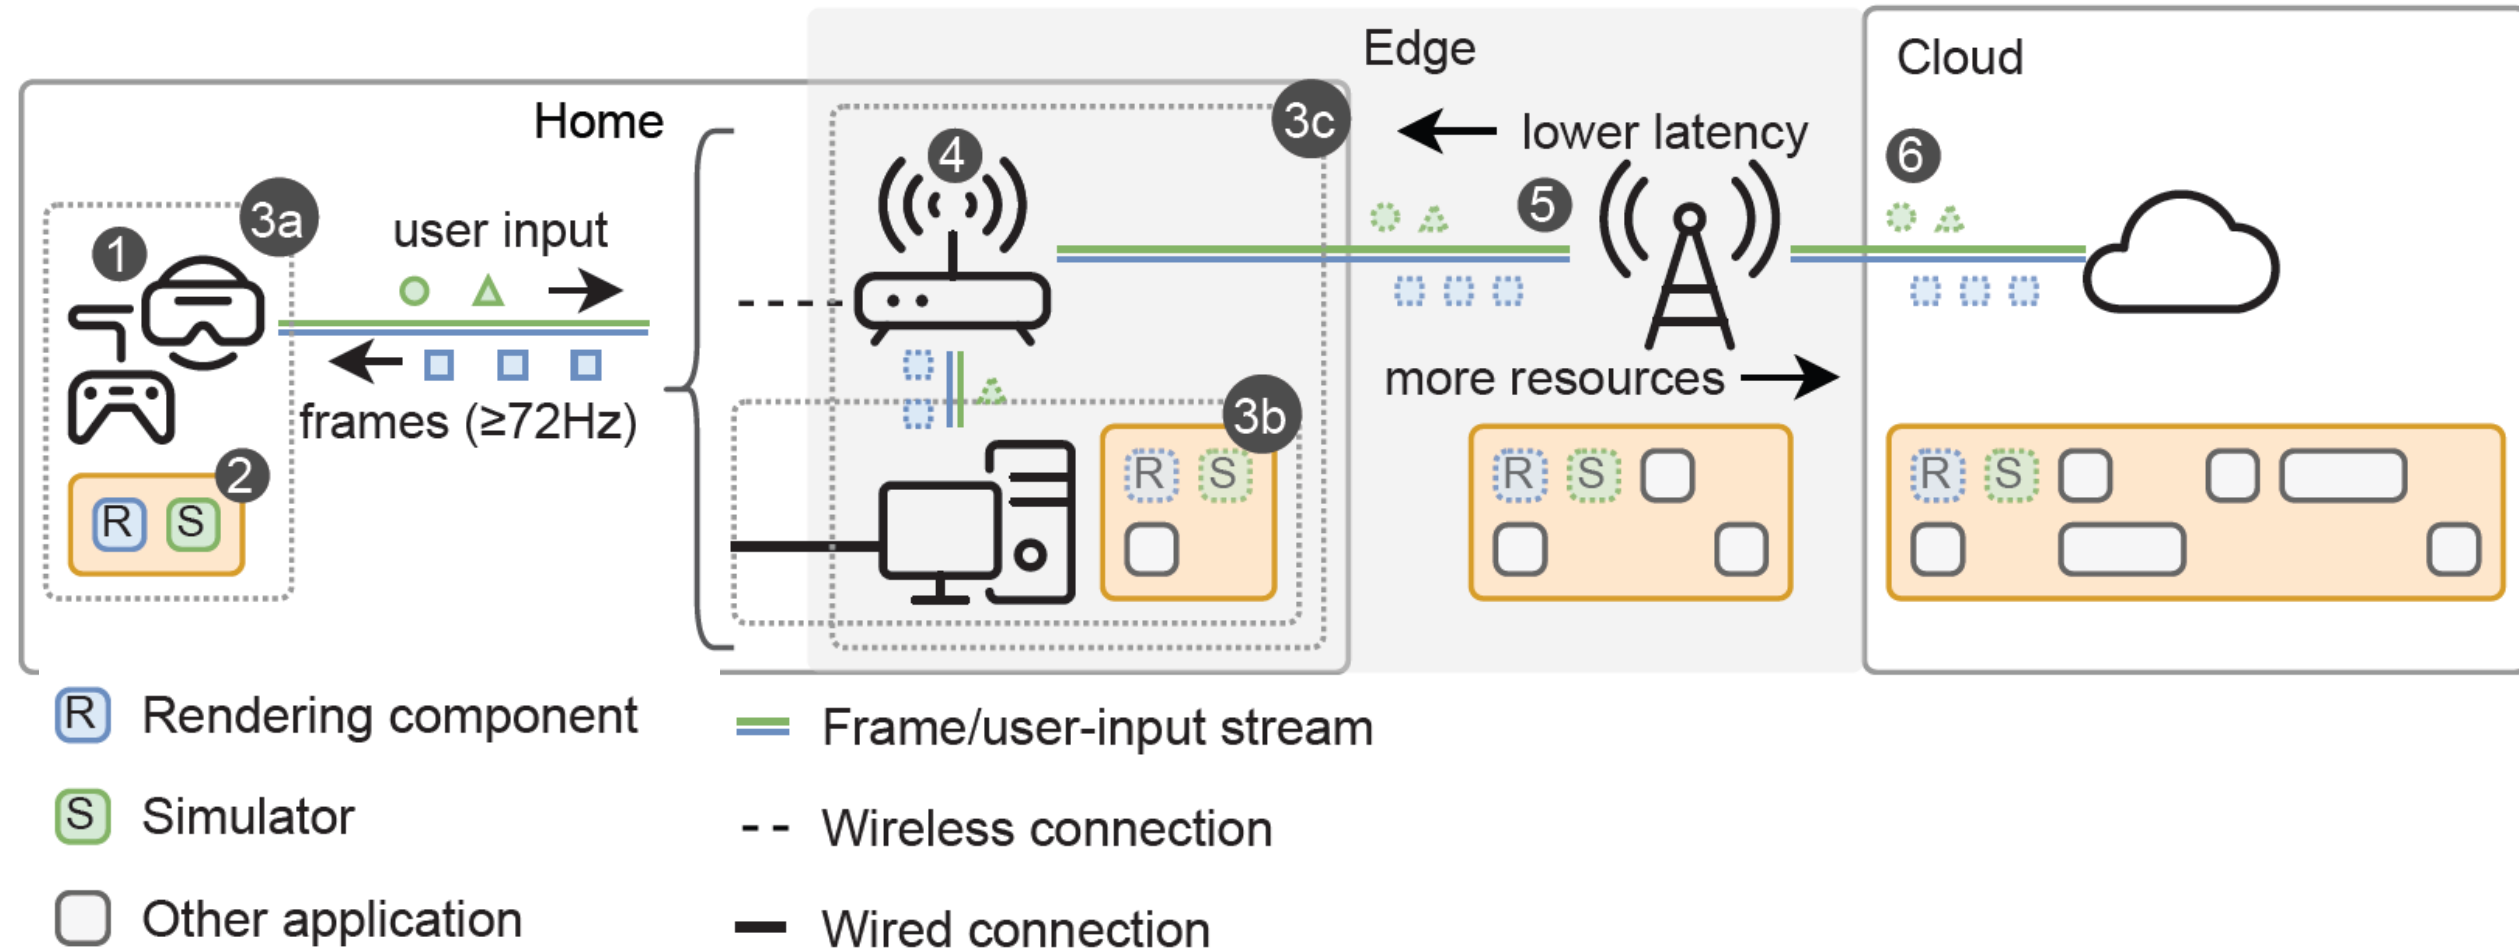

Developers said they're not 'able to predict the server performance in these kinds of situations'

How to Deploy Metaverse Infrastructure?

How to Deploy Metaverse Infrastructure?

How to answer this question?

This talk

1. Performing real-world experiments with VR devices is labor intensive, devices are scarce and expensive
2. No publicly available datasets to explore
3. No simulators for the metaverse

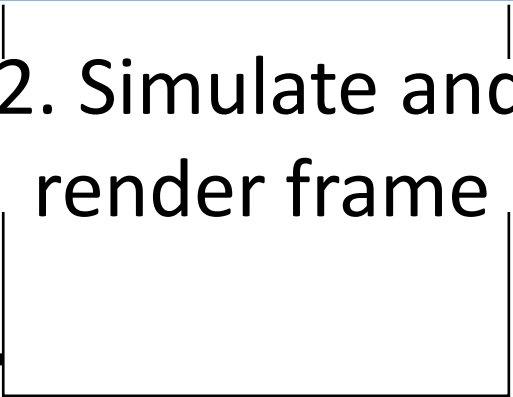

Our Approach

1. We design a tracing system to simplify and partially automate performing real-world experiments with VR devices
2. Through real-world experiments, we create an initial **dataset for metaverse systems**
3. Future work: use datasets to create a simulator to explore metaverse system behavior for a fraction of the cost (time, money)

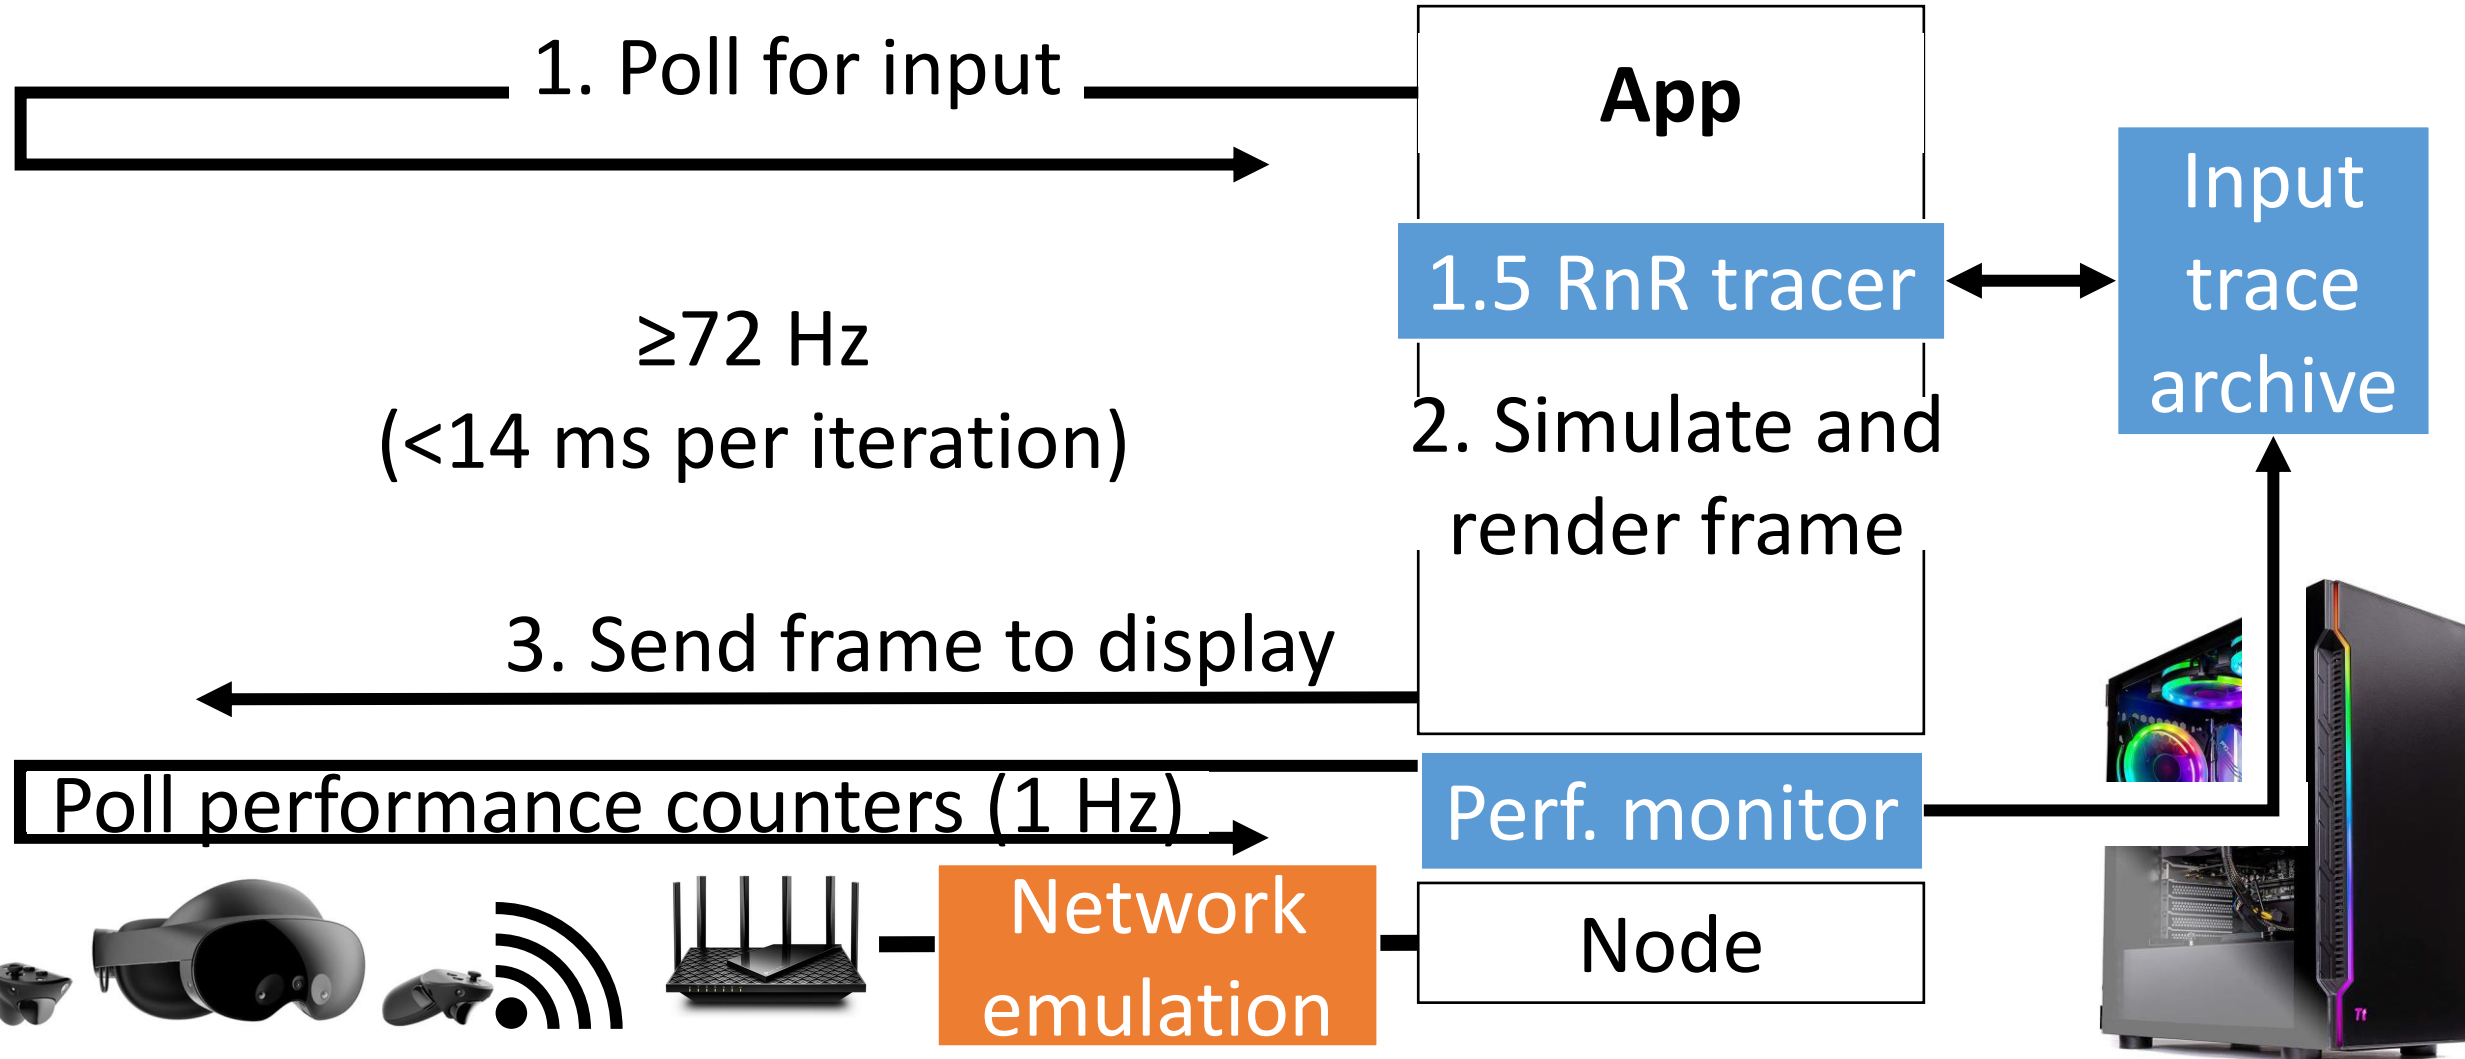

User Input Tracing with Record-n-Replay

≥ 72 Hz
(< 14 ms per iteration)

Experiment Setup

Record and Replay has low overhead

Record and Replay Input with High Timing Accuracy

VR streaming playable with (relatively) low bandwidth

Blending Reality Increases Power Use

Blending Reality Increases Power Use

Take-Home Message

1. The metaverse is an emerging ecosystem with **promising applications**
2. We have insufficient knowledge about design trade-offs and system behavior in the VR and metaverse ecosystem to overcome **frequent failures and performance degradations**
3. We address this challenge by working towards a **workload trace archive** for metaverse systems

Our Society Benefits from Games

Take Minecraft

- Over **125 million people** play Minecraft every month
- **40,000+ mods**
- **100+ games “like M’craft.”**

Generally Beneficial Features

- **Entertainment**
- **Education**
- **Activism**
- **Social Interaction**

students reconstruct Unesco world heritage sites Minecraft.
